

# The Coonan Difference

## Extended Slide Catch and Thumblock

Enables one handed operation,

## Pivoting Trigger

Enables a more consistent trigger pull  
(ships with a 4 - 4.5 lb. pull)

## Linkless Barrel

Reliable: fewer feeding issues than linked barrels. Accurate: groupings less than 2 1/2 inches at 25 yards.

## Recoil Operated

Recoil operation allows the use of jacketed and non-jacketed ammunition.

## External Extractor

External extractors are coil spring activated, making them reliable and robust. Internal extractors use leaf springs which can flatten out over time.

## Firing Control Mechanism

Same configuration as 1911 .45 caliber. All parts of this mechanism: trigger, hammer, sear, and disconnector, are made in house to our exacting specifications. The result is much more refined trigger pull.
